

InternHub

AI-powered career platform connecting Kerala Polytechnic students with scholarships and internships through intelligent automation and seamless browsing.

Website Structure

InternHub operates as a **single-page application**, delivering everything through one elegant file: `index.html`

Public Landing Section

Welcome screen with platform overview and browsing entry point

Opportunities Explorer

Dynamic search and filter interface for scholarships and internships

No admin dashboard or login required—just pure, public access for students and educators.

UI Architecture

Design Philosophy

Premium, modern interface built for speed and clarity

- Glassmorphism visual design
- Premium card-based UI components
- Smooth section transitions without page reload
- Fast browsing experience
- Advanced search with filters and sorting
- Fully responsive for mobile and desktop

Public Flow: Landing Section

01

First Impression

Premium hero banner establishes platform identity and value proposition

02

Feature Showcase

Highlight scholarships, internships, smart filters, and auto-expiry automation

03

Entry Point

Browse Opportunities CTA button provides clear path to explorer

Target Audience: All visitors including students, educators, and public users seeking opportunities

Opportunities Explorer

Advanced Discovery Tools

- Intelligent search bar with auto-suggestions
- Dynamic filters by type, location, and source
- Sort by latest, deadline, or alphabetical
- Tag-based categorization system

Opportunity Cards Display

- Title and provider organization
- Location and eligibility tags
- Deadline countdown indicator
- Direct apply button to official site

📄 **Smart Logic:** Only active opportunities appear automatically. Expired listings hide themselves. Apply buttons open official websites in new tabs.

Auto-Expiry System

Daily Cron Job

Background scheduler runs automatically every 24 hours

Database Update

Auto-hides expired opportunities and marks status

Clean Interface

Explorer always shows only current, active opportunities

Optional features include auto-deletion after retention period and duplicate detection for scraped listings.

Scraping Workflow

Source Collection

Scheduled scraper gathers listings from scholarship and internship websites

Data Extraction

Fields captured: title, type, provider, location, tags, deadline, and apply URL

Deduplication

Checks existing records to prevent duplicate entries in database

Database Save

Records marked as SCRAPED source with ACTIVE/EXPIRED status auto-applied

Data Model

Core Table Structure

Single opportunities table drives everything

Essential Fields

- Title and description
- Type (internship/scholarship)
- Provider organization
- Location and eligibility
- Tags array for categorization
- Source (SCRAPED/MANUAL)
- Deadline date field
- Apply URL link
- Status (ACTIVE/EXPIRED)

Optional supporting tables include scrape logs for monitoring and notifications for public alerts.

Security Approach

Public Read-Only Access

Landing and Explorer sections are fully accessible without authentication. Visitors can browse but not modify data.

Write Protection

Only backend automation and scraper processes can insert or update records through restricted API routes.

Secret Authentication

Scraper uses secret ingest key in headers to authenticate and access write endpoints securely.

Database Policies

Public users get SELECT access only. INSERT and UPDATE operations require authenticated backend access.

Final Capabilities

Single-Page Experience

Everything delivered through one elegant, responsive interface

Intelligent Explorer

Search, filter, and sort scholarships and internships effortlessly

Smart Automation

Auto-expiry and scraping keep content fresh daily

Direct Apply

Redirect to official websites with one click

Ready for deployment: Premium UI, automated cleanup, responsive design, and public browsing—all working together seamlessly.
